

Code:

```
#include <stdio.h>
#include <string.h>
#include <stdlib.h>

#define LEN 32

int main() {
    char var[3][LEN];
    char inp[3][LEN];
    double M = 0.0, d = 0.0, x = 0.0;
    int has_M = 0, has_d = 0, has_x = 0;
    char target = 0;

    for (int i = 0; i < 3; i++) {
        if (scanf("%s %s", var[i], inp[i]) != 2) {
            return 0;
        }
        char v = var[i][0];
        if (strcmp(inp[i], "?") == 0) {
            target = v;
        } else {
            double val = atof(inp[i]);
            if (v == 'M') { M = val; has_M = 1; }
            else if (v == 'D') { d = val; has_d = 1; }
            else if (v == 'X') { x = val; has_x = 1; }
        }
    }

    if (target == 'M') {
        printf("m %.2f\n", -d * x);
    } else if (target == 'D') {
        printf("d %.2f\n", -M / x);
    } else if (target == 'X') {
        printf("x %.2f\n", -M / d);
    }

    return 0;
}
```

Input:

M 14.00
D -4.80
X ?

Output:

x 2.92
