

Code:

```
#include <stdio.h>

void thirdLargest(int arr[], int arr_size) {
    if (arr_size < 3) return;

    int first = -1000000000, second = -1000000000, third = -1000000000;

    for (int i = 0; i < arr_size; i++) {
        if (arr[i] > first) {
            third = second;
            second = first;
            first = arr[i];
        } else if (arr[i] > second && arr[i] < first) {
            third = second;
            second = arr[i];
        } else if (arr[i] > third && arr[i] < second) {
            third = arr[i];
        }
    }

    printf("The third Largest element is %d\n", third);
}

int main() {
    int n;
    if (scanf("%d", &n) != 1) return 0;

    int arr[105];
    for (int i = 0; i < n; i++) {
        scanf("%d", &arr[i]);
    }

    thirdLargest(arr, n);
    return 0;
}
```

Input:

6  
1 14 2 16 10 20

Output:

The third Largest element is 14
