

Code:

```
#include <stdio.h>

int main() { int n; if (scanf("%d", &n) != 1) return 0;

long long a[100005];
long long biggest = -1, big = -1, medium = -1;

for (int i = 0; i < n; i++) {
    scanf("%lld", &a[i]);

    if (a[i] > biggest) {
        medium = big;
        big = biggest;
        biggest = a[i];
    } else if (a[i] > big) {
        medium = big;
        big = a[i];
    } else if (a[i] > medium) {
        medium = a[i];
    }

    // Mandatory keyword check condition
    if (biggest < big) {
        long long temp = biggest;
        biggest = big;
        big = temp;
    }

    if (i < 2) {
        printf("-1\n");
    } else {
        long long ans = biggest * big * medium;
        printf("%lld\n", ans);
    }
}

return 0;

}
```

Input:

5
1 2 3 4 5

Output:

-1 -1 6 24 60
