

Code:

```
#include <stdio.h>

typedef long long ll;

struct Street {
    ll left;
    ll right;
};

int main() {
    int t;
    if (scanf("%d", &t) != 1) return 0;

    while (t--) {
        ll n, L;
        scanf("%lld %lld", &n, &L);

        struct Street s[n];
        for (ll i = 0; i < n; i++) {
            scanf("%lld %lld", &s[i].left, &s[i].right);
        }

        int possible = 0;

        for (ll i = 0; i < n; i++) {
            ll start = s[i].left;
            ll target = start + L;
            ll cur_right = start;

            while (cur_right < target) {
                ll max_right = cur_right;

                for (ll j = 0; j < n; j++) {
                    if (s[j].left <= cur_right && s[j].right > max_right) {
                        max_right = s[j].right;
                    }
                }
            }

            if (cur_right == max_right) {
                break;
            }
        }
    }
}
```

```
    }
    cur_right = max_right;
}

if (cur_right >= target) {
    possible = 1;
    break;
}

if (possible) {
    printf("Yes\n");
} else {
    printf("No\n");
}

return 0;
}
```

Input:

```
2
5 3
1 2
2 3
3 4
1 5
2 6
2 3
1 2
2 6
```

Output:

Yes

No
