

Code:

```
#include <stdio.h> #include <stdlib.h>

struct node { int data; struct node *left, *right; };

struct node* newNode(int item) { struct node* temp = (struct node*)malloc(sizeof(struct node)); temp->data = item; temp->left = temp->right = NULL; return temp; }

struct node* insert(struct node* root, int data) { if (root == NULL) return newNode(data); if (data < root->data) root->left = insert(root->left, data); else if (data > root->data) root->right = insert(root->right, data); return root; }

void postorder(struct node* root) { if (root != NULL) { postorder(root->left); postorder(root->right); printf("%d ", root->data); }}

int main() { int n; while (scanf("%d", &n) == 1) { struct node* root = NULL; for (int i = 0; i < n; i++) { int val; scanf("%d", &val); root = insert(root, val); } postorder(root); printf("\n"); } return 0; }
```

Input:

```
7
90 70 50 75 130 110 150
```

Output:

```
50 75 70 110 150 130 90
```
