

Code:

```
#include <iostream>
#include <queue>

using namespace std;

class Stack {
    queue<int> q;

public:
    void push(int val);
    void pop();
    int top();
};

void Stack::push(int val) {
    int s = q.size();
    q.push(val);
    for (int i = 0; i < s; i++) {
        q.push(q.front());
        q.pop();
    }
}

void Stack::pop() {
    if (!q.empty()) {
        q.pop();
    }
}

int Stack::top() {
    if (q.empty()) return -1;
    return q.front();
}

int main() {
    int n, m;
    if (!(cin >> n >> m)) return 0;

    Stack s;
    for (int i = 0; i < n; i++) {
```

```
int val;  
cin >> val;  
s.push(val);  
}  
  
cout << "top of element " << s.top() << endl;  
  
for (int i = 0; i < m; i++) {  
    s.pop();  
}  
  
cout << "top of element " << s.top() << endl;  
  
return 0;  
}
```

Input:

```
5 2  
1 2 3 4 5
```

Output:

```
top of element 5  
top of element 3
```
